

Obstruction lighting system for high voltage lines, red fixed low intensity

- ✦ suitable for high voltage from 60KV to 400KV with fixing accessories and capacitive elements with a cable
- ✦ clamp adapted to the diameter of the cable
- ✦ BALISOR® lamp B33 P/N100616 with interference suppression included
- ✦ red fixed color with light intensity higher than 10 candelas

The power supply by capacitive effect ensures a constant light intensity whatever is the value of the electric current crossing the line

Length of the drift depending on the voltage

Electrical Characteristics	
Power source	Autonomous by capacitive effect
Mechanical Characteristics	
Cable diameter	Ø19-25mm
Attachment	Aluminium clamps
Photometric Characteristics	
Luminous intensity	> 10 Cd
Standards	
Standards compliance	ICAO Aerodrome Design Manual Part 4 chapter 14
